fischer
aircrete anchor FPX-I

Unique in aerated concrete.
Aircrete anchor FPX-I – the strong internal thread anchor with unique 4-fold expansion.

Intelligent, fast and easy.
- The FPX-I is suitable for pre-positioned installation.
- Pre-drilling enables the anchor to be hammered in easily, even in high-strength aerated concrete. It is not necessary to clean the drill hole.
- Following optimum expansion, the hexagon wrench is automatically released from the anchor.
- When the anchor is installed, the internal thread bolt is turned and this pulls the cone into the square expansion sleeve. In the process, the aerated concrete is compressed at the four ribs and an undercut is made in the aerated concrete.

Your advantages at a glance
- The easy expansion by means of a cordless screwdriver or ratchet ensures maximum installation convenience.
- The displacement-controlled expansion of the anchor ensures secure and reliable, uniform and effortless installation.
- The unique 4-fold expansion of the FPX-I ensures high tension and shear loads and therefore means fewer fixing points.
- The first steel anchor with ETA approval and fire test certificate for fixing in aerated concrete enables use in safety-relevant fixings as well.

Installation
- Drill a hole.
- Hammer in the anchor until it is flush with the top edge of the aerated concrete.
- Tighten the anchor with the hexagon wrench.
- Automatic setting control through the release of the hexagon wrench from the anchor.
- Use a screw or threaded rod to fix the attachment. Finished!
Different attachment thicknesses possible

Can also be used for fixings in coated (e.g. plastered) aerated concrete masonry. In this case, the anchor must be set flush-mounted with the fixing substrate (aerated concrete).

Approved for stand-off installations/suspension elements

Able to support loads immediately after installation

Fire resistant according to DIN 4102 (Class A1)

Approved from 100 mm building member thickness

Applications, product range.

FPX-I: The internal thread anchor for optimum flexibility in aerated concrete

Approved for the following construction materials

- Aerated concrete masonry with compressive strength PB 1.6 to PB 6.0 N/mm²
- Aerated concrete wall and ceiling slabs with compressive strength 3.3 to 4.4 N/mm²

Ideal for a large number of applications in dry interiors

- Cable trays
- Ventilation ducts
- Pipe lines
- Guard rails/handrails
- Kitchen cabinets
- Suspended ceilings

1) Includes an allowance for the partial safety factors of the resistances stipulated in the approval and a partial safety factor of the action of γ = 1.4.
2) Smallest possible centre-to-centre spacing or edge distance without reduction in the allowable load.
3) Applies to tension load, shear load and diagonal load under any angle.
4) Brick/block strength class f_{ck} and dry density \rho_m according to EN 771-4 and EN 12602 respectively.
5) If the anchor is unable to support itself against the attachment when tightened, no torque may be applied (T_max = 0).
6) If 4 anchors are used they are arranged in a rectangle.
7) In the case of a masonry joint, calculations are required to verify that the brick block is not pulled out.
8) Allowable total load of the anchor group.
9) No joint distance is required for all-over grouting of the joint with a joint width of ≤ 12 mm and a mortar compressive strength according to EN 998-2 ≥ f_{ck} aerated concrete.
10) In the case of concealed joints, the allowable total load of the anchor group must be halved and calculated as a multiple fixing in accordance with ETAG 001, Annex C.
11) For reinforced aerated concrete slabs with a slab width of ≤ 700 mm: c_1 ≥ 150 mm.
12) Value in brackets applies to aerated concrete slabs.
13) c_1 for tensile load or shear load parallel to the ungrouted joint with a width ≤ 2 mm.
14) c_1 for transverse tensile force or inclined tensile force orthogonally to the ungrouted joint with width ≤ 2 mm.
15) The intermediate spacings and edge distances for anchor groups apply to 2 single anchors with spacing ≤ 375 mm (≥ s_min).

Our 360° service for you.

As a reliable partner, we are there to provide help and advice whenever you need it:

- Our product range extends from chemical systems to steel anchors through to plastic anchors.
- Expertise and innovation through in-house research and development.
- Worldwide presence and active sales service in more than 100 countries.
- Qualified applications advice for economical fixings solutions in conformity with the relevant regulations and guidelines. If necessary, on site too.
- Training courses, some with certification, on your premises or in the fischer ACADEMY.
- Design and calculation software for high-quality and sophisticated fixings.
